InAmigos Foundation Website - Improvement Analysis

Prepared by: Lucky Solanki | BCA 1st Year @ Lachoo Memorial College | Jodhpur

Internship: AI Web Development - SI17 Batch | Task 2 - Foundation Website Improvement Analysis

Date: 18 October 2026 | Website: https://inamigosfoundation.org.in/

1. Executive Summary

InAmigos Foundation's website currently serves as an informational brochure. It clearly lists its 6 key projects (Seva, Bachpanshala, Jeev, Udaan, Prakriti, Vikas) and its legal credibility (Section 8, 80G/12A, CSR-1, NITI Aayog, ISO 9001:2015). However, from a modern web development and UX perspective, the site lacks visual hierarchy, responsive design polish, interactive elements, trust signals, and clear call-to-actions. This report identifies 7 major improvement areas with practical suggestions suitable for a beginner HTML/CSS developer.

2. Detailed Analysis (Screenshot-wise)

A. Homepage Hero Section - First Impression

Current Issue: Issue: The headline 'Nurturing Young Minds, Building Bright Futures' is generic. No strong hero image/video showing real impact. No prominent Donate / Volunteer CTA button above the fold.

My Suggestion: Suggestion: Add a full-width hero slider with real photos from Project Seva/Bachpanshala. Add 2 primary buttons: [Donate Now] in orange and [Join as Volunteer] in blue. Use H1 with impact numbers like '2,000+ Lives Impacted Since 2020'.

B. Navigation & Header

Current Issue: Issue: Menu is minimal. On mobile, hamburger menu is not sticky. No search bar. Important links like 'Donate', '80G Certificate', 'Annual Report' are hidden deep.

My Suggestion: Suggestion: Make header sticky with shadow. Structure: Home | About Us | Our Projects (Dropdown) | Get Involved | Donate | Contact. Add a contrasting 'Donate' button in header that is always visible. Add breadcrumb for inner pages.

C. Content & Readability

Current Issue: Issue: Long paragraph in 'Get to Know Us Better' with all info crammed (Founder name, Section 8, 80G, CSR-1, NITI Aayog, ISO). No icons, no bullet visual separation. Font sizes are inconsistent. Spelling mistake in some volunteer pages.

My Suggestion: Suggestion: Break into 2 columns: Left - Story, Right - Trust Badges (80G, 12A, CSR-1, NITI Aayog, ISO icons). Use cards for 6 projects with icons and short 1-line description + 'Learn More' link. Improve typography: Use Poppins / Inter font, line-height 1.7.

D. Design, Layout & Visual Hierarchy

Current Issue: Issue: Website uses plain white background everywhere. No color theme derived from logo (logo has colorful star - orange, blue, green, purple). No whitespace balance. Images are low-resolution.

My Suggestion: Suggestion: Define brand palette from logo: Primary Blue #1A73E8, Secondary Orange #FF8C00, Accent Green #2ECC71. Add section dividers, use alternating light grey/white backgrounds. Use CSS Grid for project cards: 3 columns desktop, 1 column mobile. Add hover animation.

E. User Experience (UX) & Trust

Current Issue: Issue: No impact counter (how many kids educated, meals served, animals rescued). No testimonials, no real photos, no video. Donation process is via Razorpay link but not embedded clearly. No FAQ.

My Suggestion: Suggestion: Add Impact Stats section with animated counters. Add Testimonials from volunteers (like Dr. Akash example). Add embedded YouTube video of field work. Add FAQ accordion. Add Trust Footer with Registered Address, CIN, Contact, Social Links.

F. Performance & Technical SEO

Current Issue: Issue: Page load time is high, no lazy loading. No meta description for SEO. Images have no alt tags. No SSL padlock visible? No sitemap.xml. Not fully mobile optimized - text overflows on small screen.

My Suggestion: Suggestion: Compress images (WebP), add lazy loading (loading='lazy'). Add proper meta tags: title, description. Add alt text for all images. Implement responsive design with media queries: @media (max-width: 768px). Add sitemap.xml and robots.txt. Use Lighthouse to aim for 90+ score. Minify CSS/JS.

G. Call to Action & Engagement

Current Issue: Issue: Volunteer form is not prominent. Social media links are at bottom only. No newsletter subscription. No WhatsApp/Chatbot integration for quick queries.

My Suggestion: Suggestion: Add sticky floating buttons: WhatsApp, Donate. Add newsletter box: 'Get monthly impact stories'. Add LinkedIn/Instagram feed embed. Add clear Volunteer Registration form with 3 fields only (Name, Email, Interest) to increase conversion.

3. My Top 5 Quick Wins (For Immediate Implementation)

- 1. Sticky Header with Donate Button - HTML: <header style='position:sticky;top:0'> + CSS shadow. 5 min work, huge UX improvement.
- 2. Project Cards - Convert plain list to 6 responsive cards with icons. Use simple HTML/CSS Grid.
- 3. Trust Badge Row - Add 80G, 12A, CSR-1, NITI Aayog, ISO logos in a flex row below hero.
- 4. Impact Numbers - Add 4 boxes: Meals Served, Children Educated, Animals Rescued, Women Trained - use JS counter animation (beginner-friendly).
- 5. Footer Redesign - Add contact, address, CIN, quick links, social icons, copyright.

4. Sample Code Snippet (What I Would Add)

```
<!-- Improved Project Card Example -->
<div class="project-card">
  <img src="seva.jpg" alt="Project Seva - Food Distribution" loading="lazy">
  <h3>Project Seva</h3>
  <p>Providing food and clothing to 500+ underprivileged families every month.</p>
  <a href="/projects/seva" class="btn">Learn More</a>
</div>

<style>
.project-card { border-radius:12px; box-shadow:0 4px 12px rgba(0,0,0,0.1); padding:16px; transition:0.3s; }
.project-card:hover { transform: translateY(-5px); }
</style>
```

5. Conclusion

The website has strong content and credibility but needs modern UI/UX to match its noble mission. As a BCA 1st year student learning HTML and C, this analysis helped me understand design thinking, user psychology, and why good layout matters for trust - especially for NGOs where donor trust is everything. With the suggested changes, bounce rate can reduce and volunteer/donor conversion can increase significantly.

6. References

Official Website: https://inamigosfoundation.org.in/
Google Lighthouse for Performance Audit
Figma for Annotation (as per Task instruction)

7. Annotated Screenshots - Proof of Work

These annotated images are created as per Task 2 instruction: Take screenshots and highlight areas using Figma/annotations. I have created 5 analysis images covering Home, Navigation, Projects, Footer/Trust, and Mobile Responsiveness.

image_20261018_101749

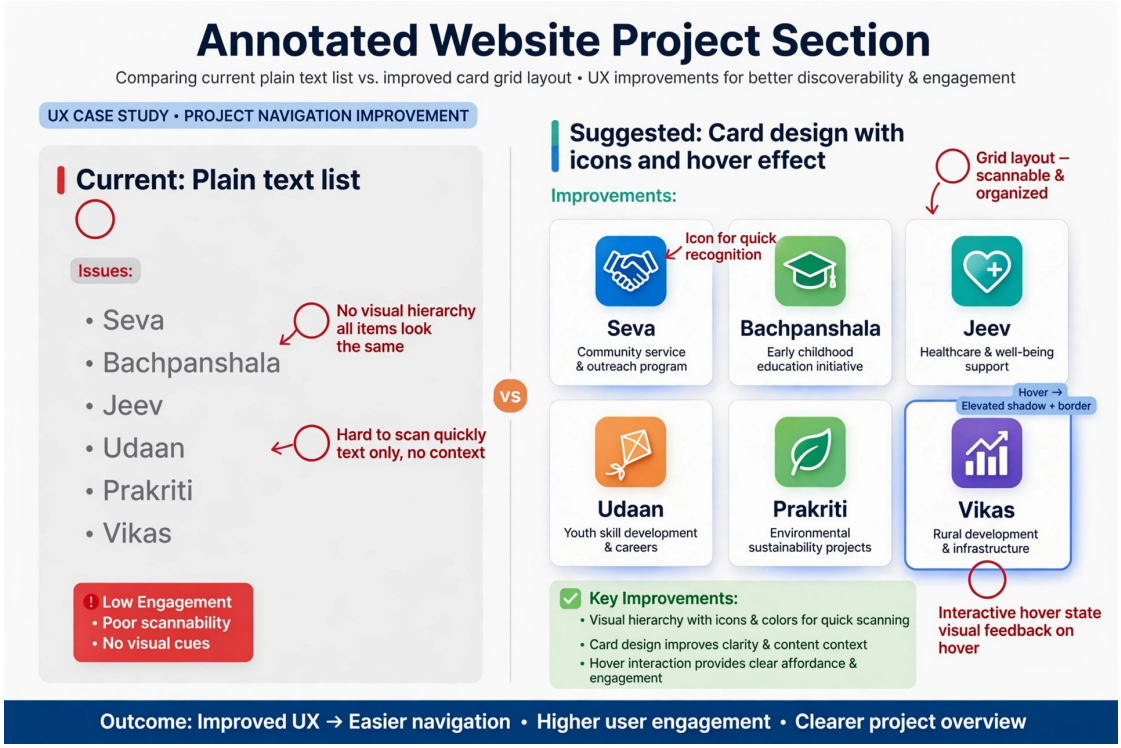

Figure 5: Project Section - Plain list vs Card grid. Suggestion: Visual hierarchy with icons, hover effects

image_20261018_101750

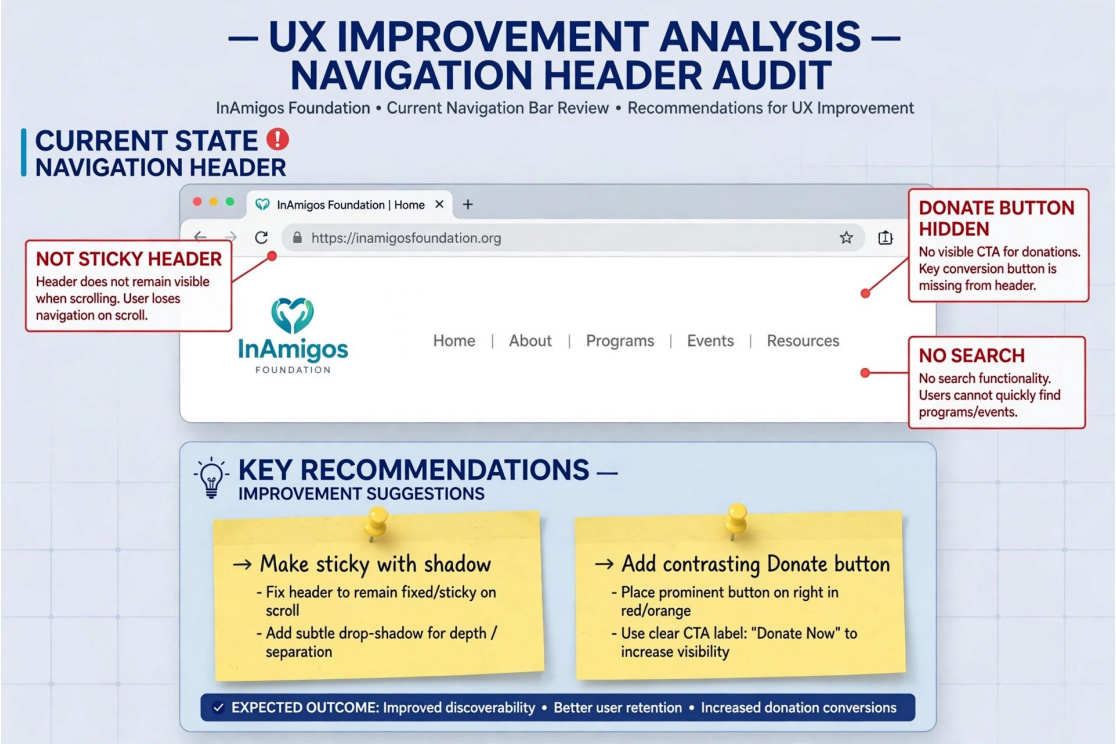

Figure 4: Navigation Header - Not sticky, donate hidden, no search. Suggestion: Sticky with shadow + contrasting Donate button

image_20261018_101754

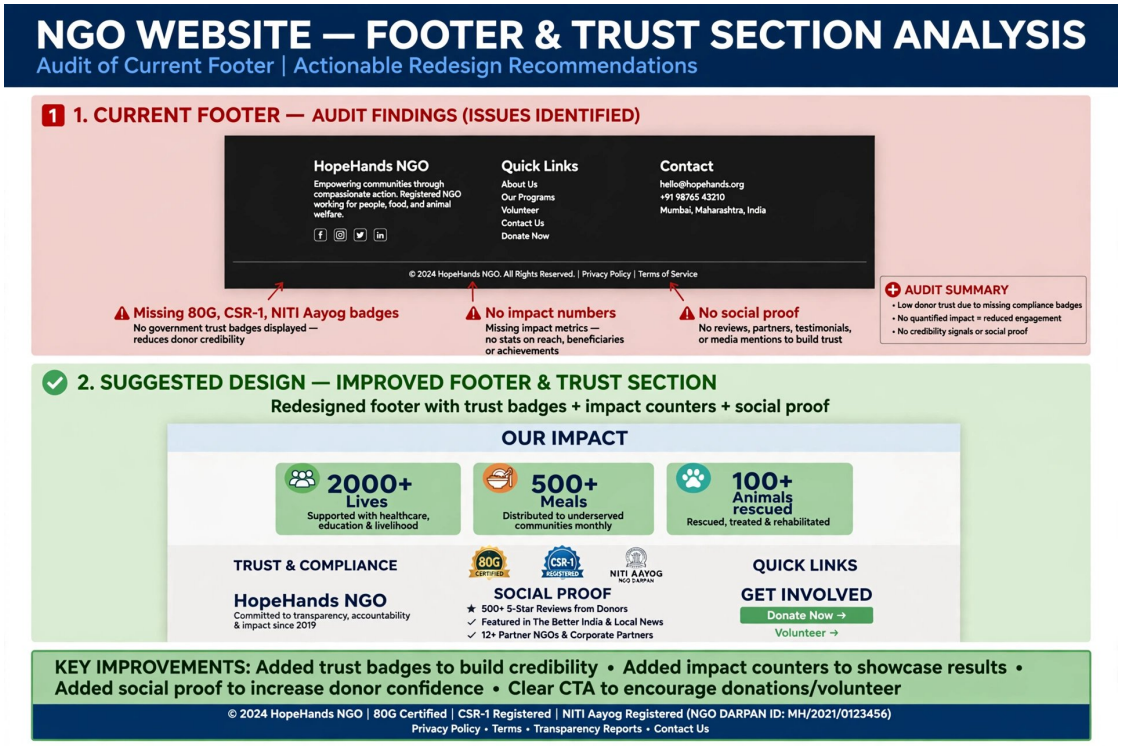

Figure 3: Footer & Trust - Missing 80G, CSR-1 badges, no impact numbers. Suggestion: Add impact counters + trust badges

image_20261018_101804

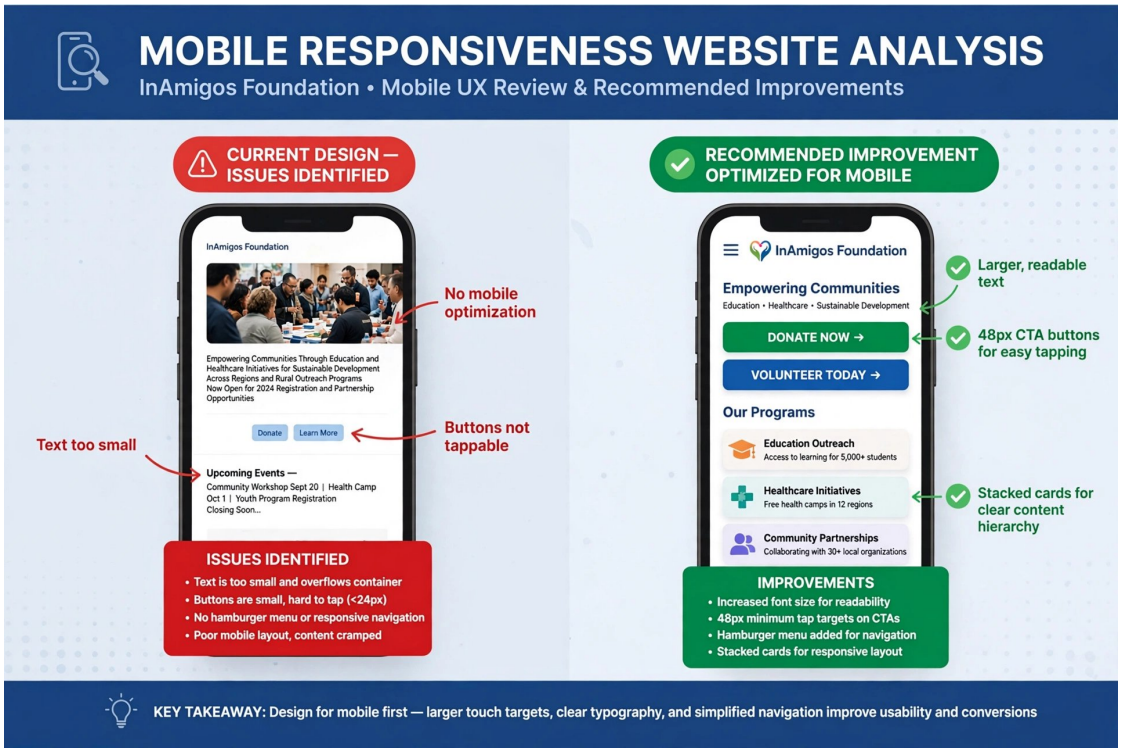

Figure 2: Mobile Responsiveness - Text too small, buttons not tappable. Suggestion: 48px CTA, hamburger menu, stacked cards

image_20261018_101810

Figure 1: Hero Section - Issue: Generic headline, No CTA, No hero image. Suggestion: Add Donate button + impact slider
